

SYSTEM AND METHOD FOR PROVIDING OCCUPATIONAL INFORMATION

ABSTRACT OF THE DISCLOSURE

A system and method for providing occupational information provides users with access to occupational information. The system includes a raw data storage component by which job descriptions, job titles, job-related skills, job demands, and other work measures are collected, analyzed, and reported. The system also includes a job availability component where counts of specific jobs are created and maintained. The system collects data from multiple sources including end-user applications running on client computers and server applications running on peripheral servers. The system may also collect data from other sources associated with occupational information. Use of the system may result in the system being updated.
